HYBRID TEA ROSES

A complete new list of varieties this year. New varieties, new colors, new hardiness and freedom from disease. We believe our Rose offerings this year cannot be excelled in the East.

Note especially the new Floribunda group representing varieties especially bred for hardiness, sturdiness, ease of culture, and mass color effects. The habit of growth is of medium height. They are very Winter hardy; therefore permanent, disease resistant, bloom continuously in large clusters and do not fade unpleasantly in hot Summer suns. The group does not include any one particular strain, but is the result of intensive hybridizing both here and in Europe, to make available in desirable colors and shapes the arcticness of many species and varieties.

Postage is prepaid on Rose orders of $2.00 east of the Mississippi River and west of the Mississippi on orders of $5.00.

All Roses, except where otherwise noted:
65c. each, or $7.00 per doz.

FLORIBUNDA ROSES

The Floribunda varieties should be planted in groups of three or more of a kind. Plant them among the shrubs for continuous color. They are useful as hedges or borders. When planted 15 to 18 inches apart they will shade the ground and the flowers will blanket the foliage. In the smaller gardens they also are a continuous source of excellent cut flowers for the house. Illustrated are three extremely fine varieties.
